

Antigua and Barbuda

Global Youth Tobacco Survey (GYTS)

FACT SHEET

The Antigua and Barbuda GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, environmental tobacco smoke exposure (ETS), cessation, media and advertising, and school curriculum. These determinants are components Antigua and Barbuda could include in a comprehensive tobacco control program. The Antigua and Barbuda GYTS was a school-based survey of students in grades 7, 8, and 9

conducted in 2004. A two-stage cluster sample design was used to produce representative data for all of Antigua and Barbuda. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 91.8%, and the overall response rate was 91.8%. A total of 1,651 students participated in the Antigua and Barbuda GYTS.

Prevalence

- 21.4% of students had ever smoked cigarettes (Male = 24.2%, Female = 18.3%)
- 14.4% currently use any tobacco product (Male = 16.2%, Female = 11.5%)
- 4.5% currently smoke cigarettes (Male = 4.3%, Female = 4.3%)
- 12.4% currently use other tobacco products (Male = 14.2%, Female = 9.7%)
- 12.0% of never smokers are likely to initiate smoking next year

Knowledge and Attitudes

- 32.3% think boys and 18.4% think girls who smoke have more friends
- 7.9% think boys and 7.8% think girls who smoke look more attractive

Access and Availability - Current Smokers

- 33.4% usually smoke at home
